Highly interactive scientific **CORE PROGRAM** with a limited number of participants, which will

- provide a unique opportunity to discuss with international thought leaders the role & limitations of cost effectiveness analysis as a tool to inform HTAs, how to deal with them, and how they might be overcome;
- help to understand the prospects for the future role of European and national HTAs in an increasingly turbulent geopolitical environment, with particular emphasis on their health economic component;
- assist executives, research & development (R&D) managers, and clinical developers navigating successfully in the world of value assessments, with a view towards pricing and reimbursement outcomes;
- contribute to shaping the future environment, considering the perspectives of patients and citizens.
